

GitHub Account Creation & Project Upload Steps Documentation

Steps of GitHub

Author: Kiran D.

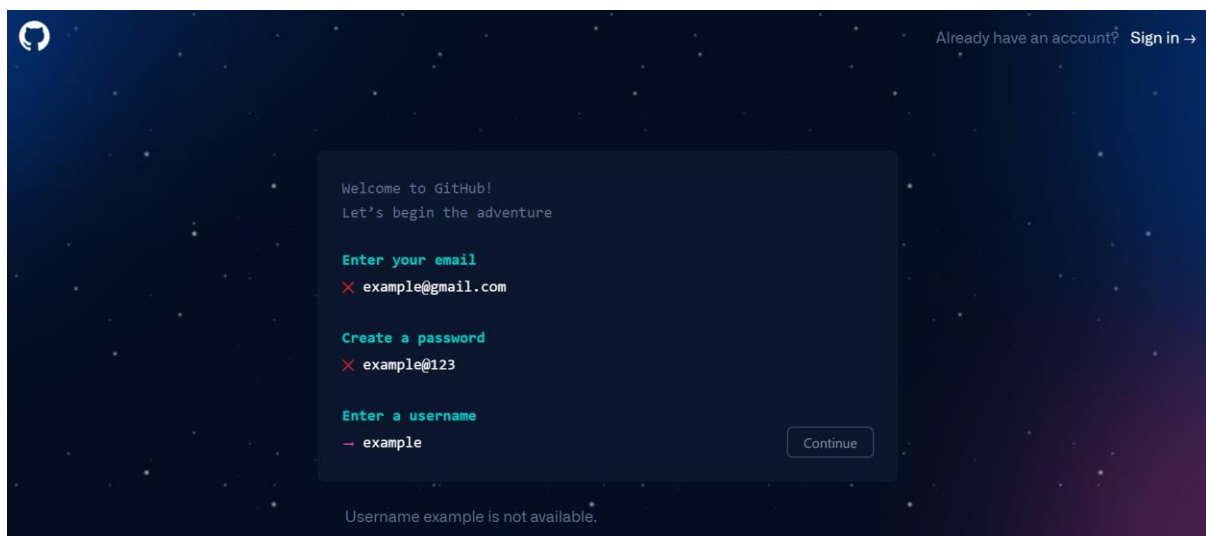

The Kiran Academy

GitHub account Creation and Setup

Step 1: Go to GitHub <https://github.com/>, Click on Sign up to create new account.

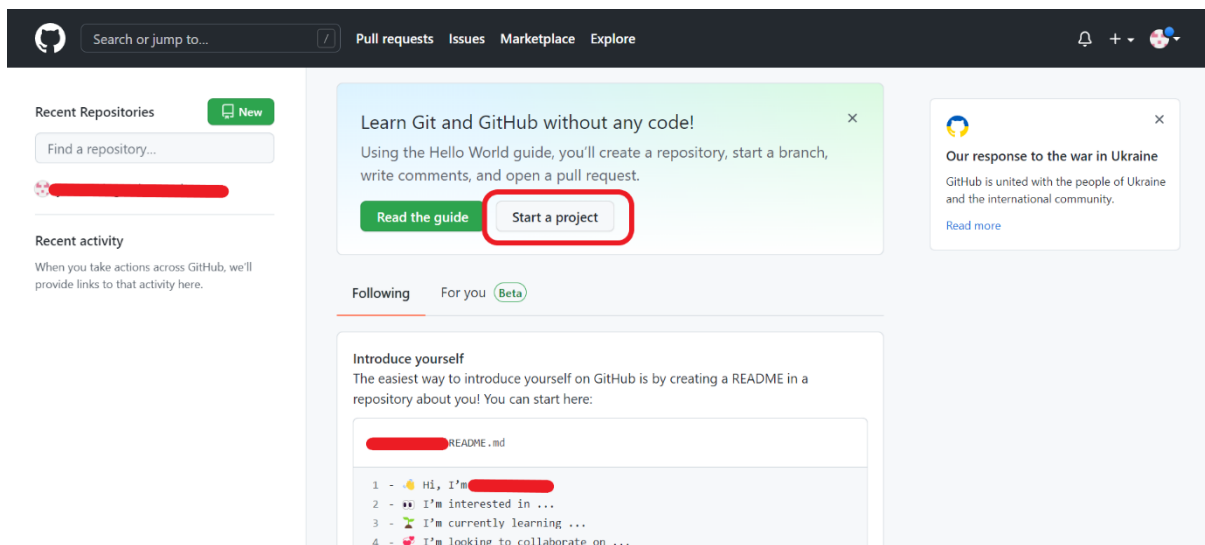

Step 2: Enter Gmail, new password and new username for GitHub. All details should be valid to create an account.

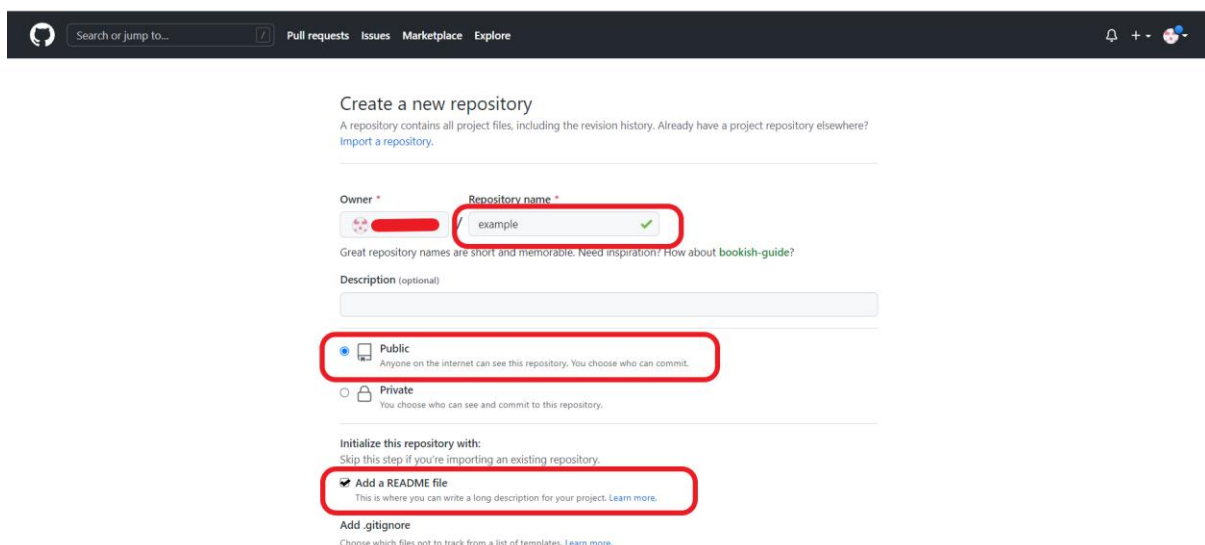

Step 3: You will be automatically redirected to GitHub home page. If not use username and password which you have created in step 2 to login to GitHub.

Step 4: After logging in, you will see a GitHub window as below. Click on 'Start a project' button to create a new project/repository in GitHub.

Step 5: After clicking on Start a project button, you will see a window as below. Enter a repository name and select public option to create a new repository. Add a README file is optional. Keep other settings as default.

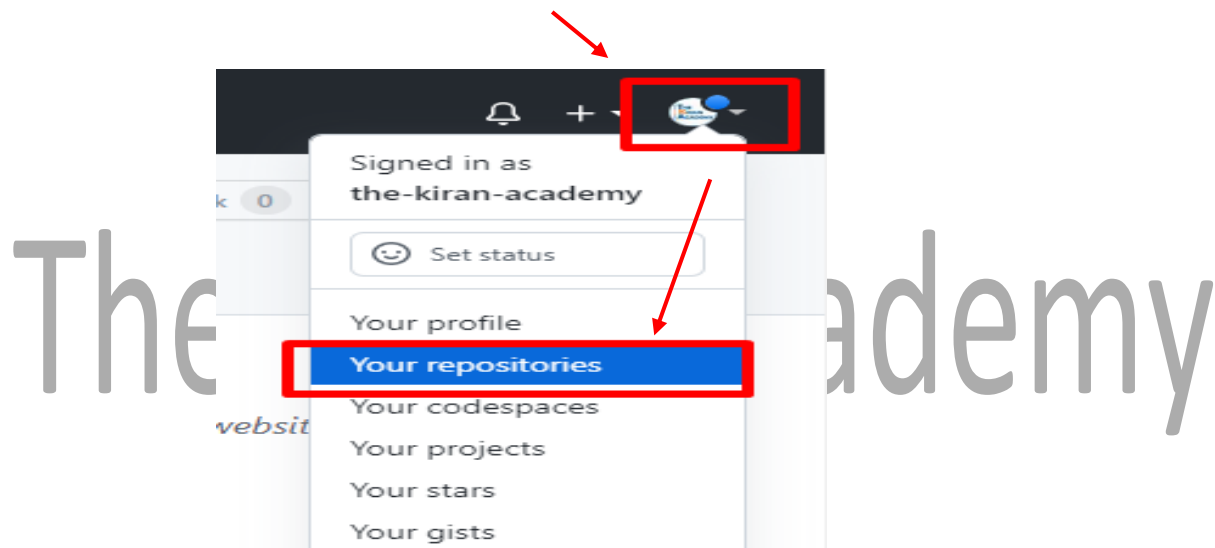

After inserting the above information, click on 'Create repository' button at the bottom of the page.

 You are creating a public repository in your personal account.

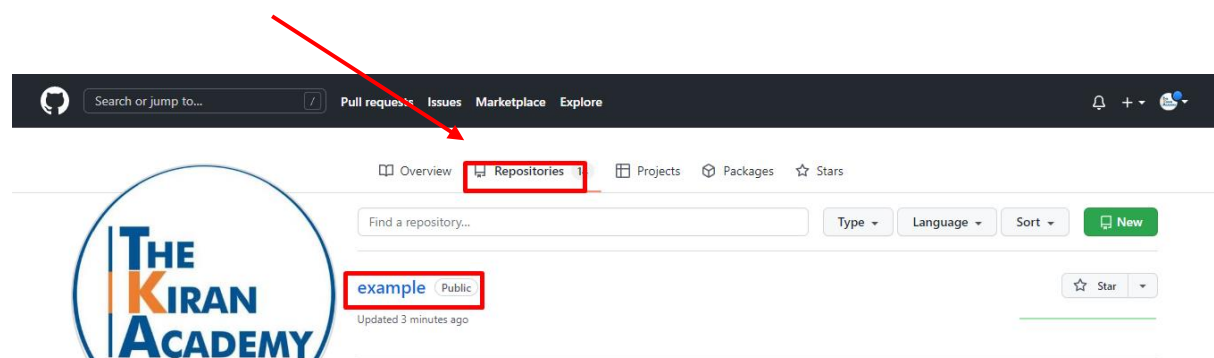

Create repository

After repository creation you can see this repository.

- Click on profile arrow and then your repositories.

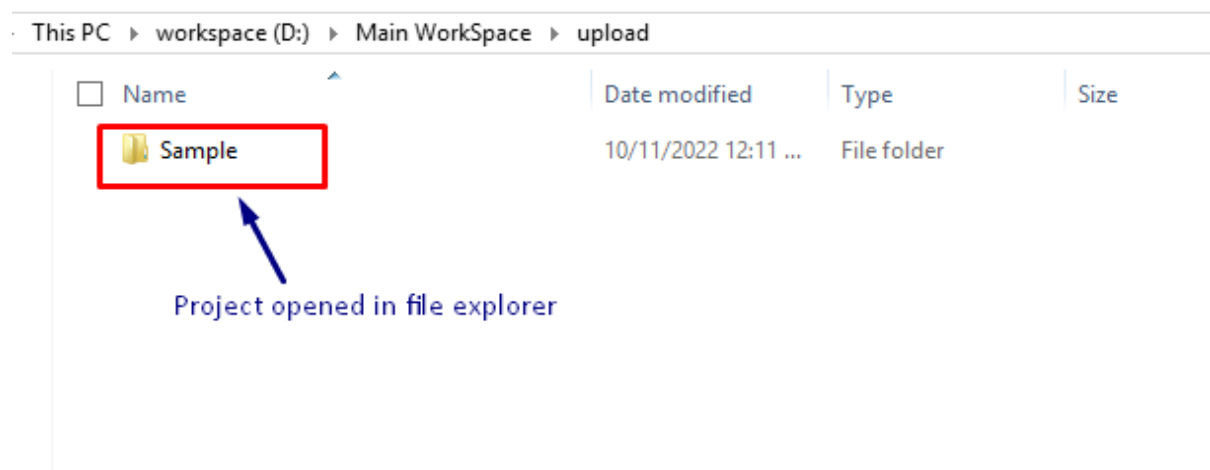

- Then click on Repository

Upload Project in created repository

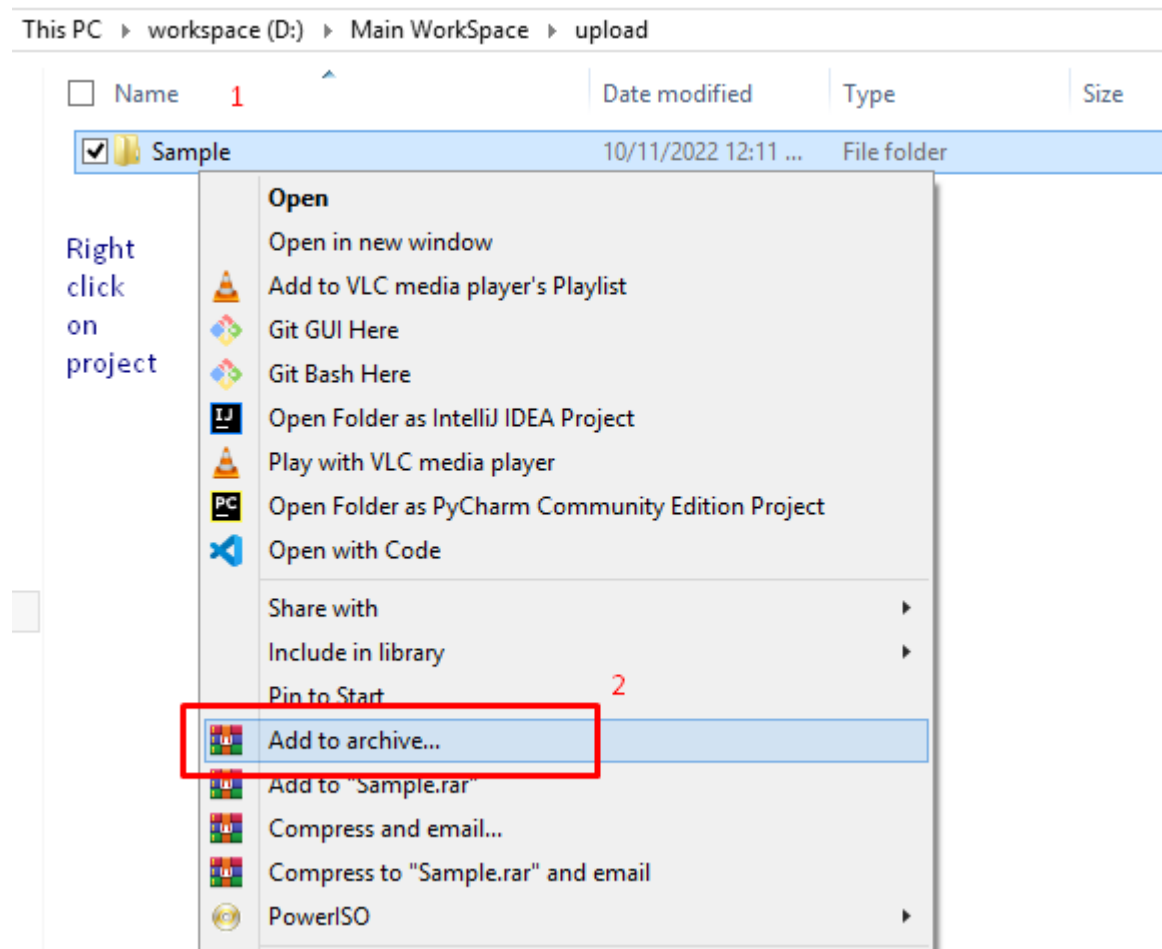

Step1: Open project in file explorer (Go to workspace directory)

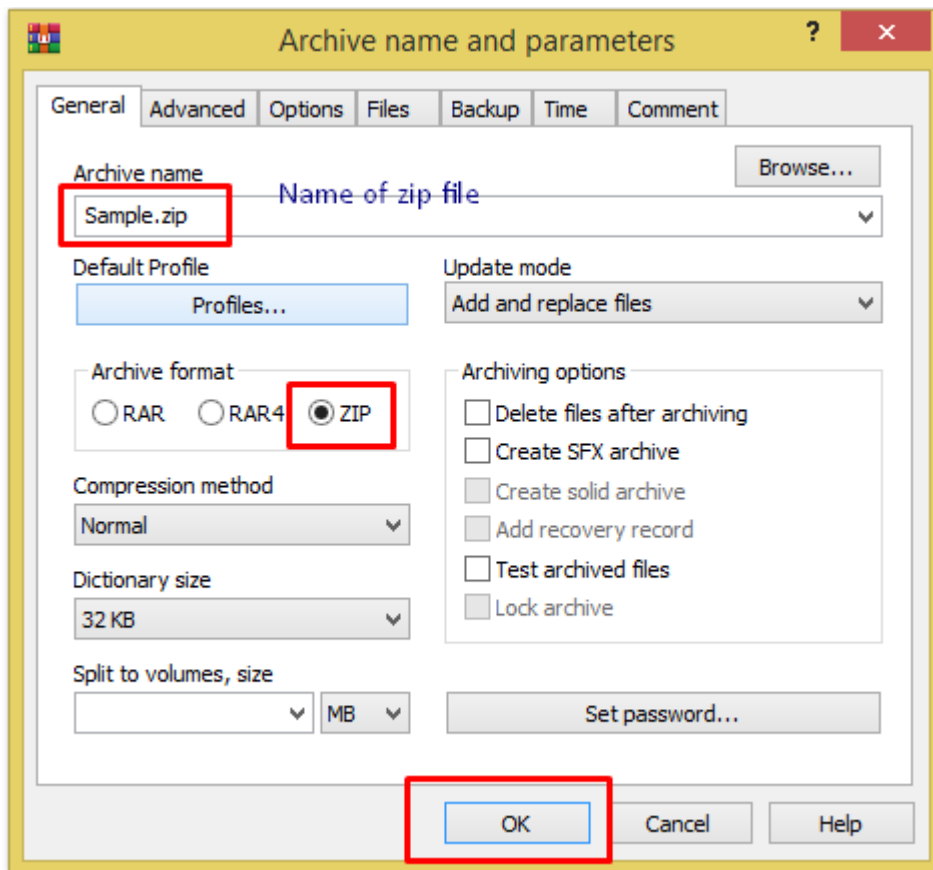

Step2: write click on project and make .zip of that project.

Note: Install WinRAR software in your laptop for creating zip file of any folder

[Click here](#) to download WinRAR

Step 3: Give name of .zip file & select ZIP option

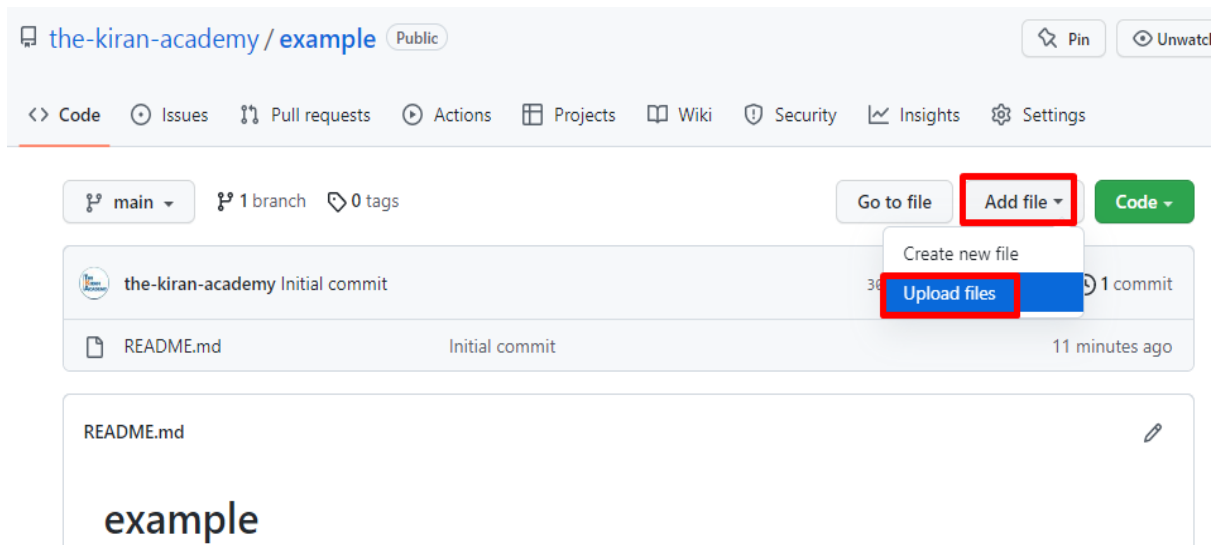

Once you created .zip file then its look like below image

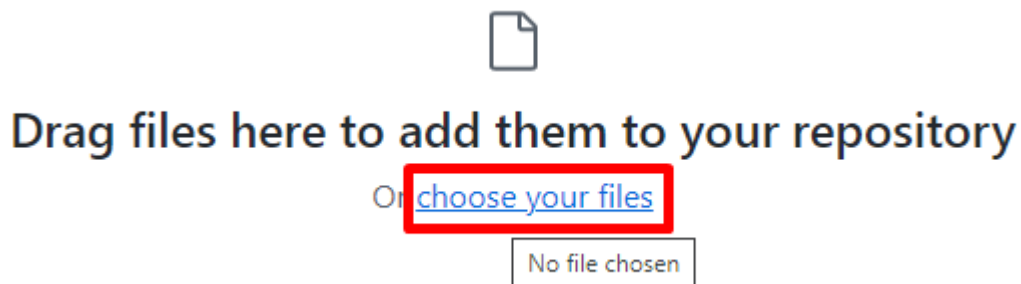

Step 4: Now upload this .zip file into created repository

- Click on created repository and opened it
- Click on Add File >> upload files

Now choose your zip file.

Scroll down and commit changes

Sample.zip

 **Commit changes**

Add files via upload

first commit

Give any message in commit

☒ Commit directly to the `main` branch.

☐ Create a new branch for this commit and start a pull request

Commit changes Cancel

After committing changes you can see your Sample project on GitHub repository

Creating a personal access token (Optional)

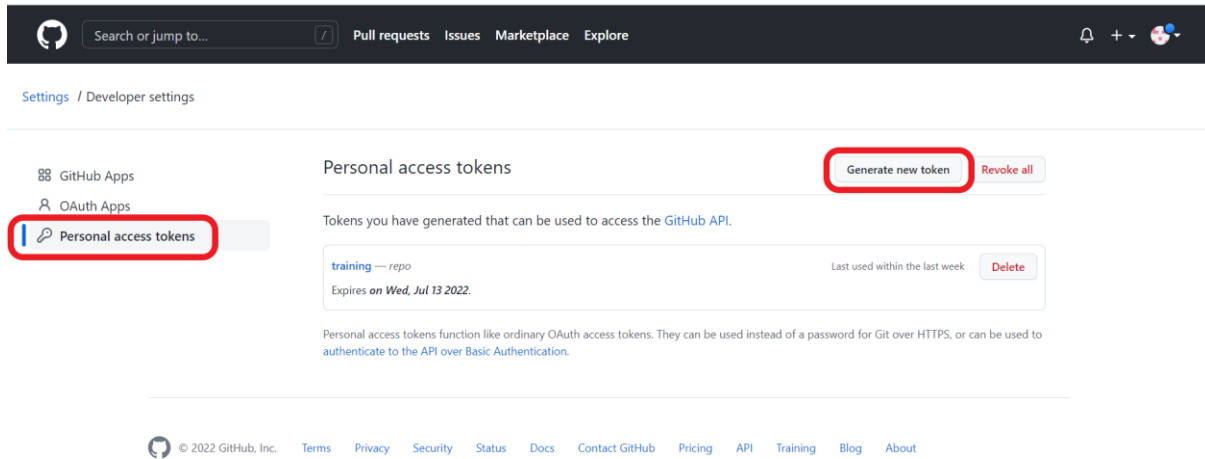

Step 1: Click on profile icon on the top right corner, go to settings.

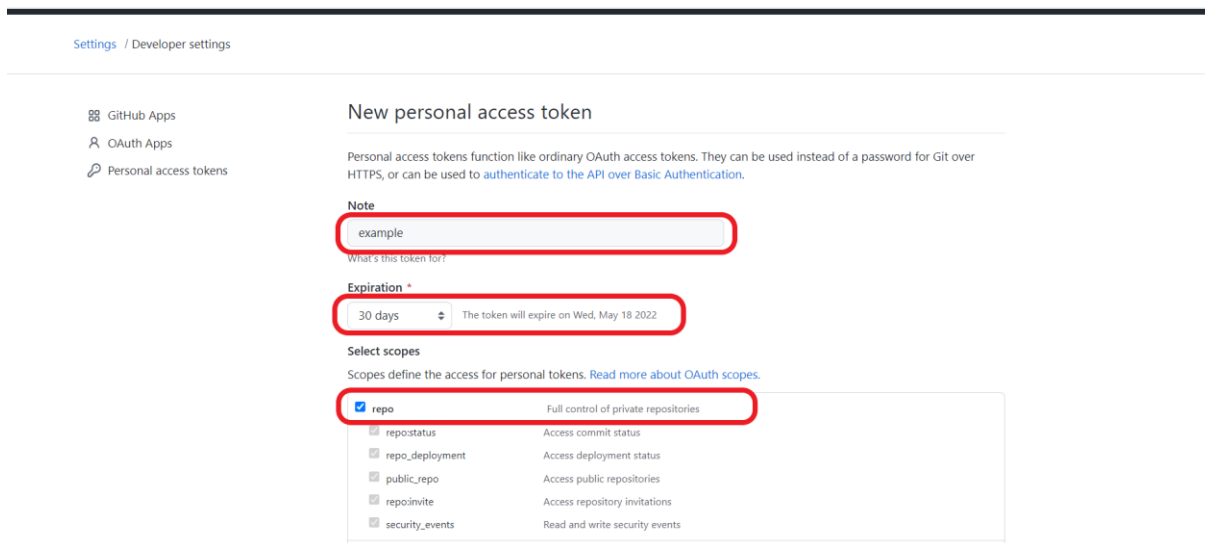

Step 2: On the settings page, scroll down. On the left-hand side, click on 'Developer settings'.

Step 3: You will see a page as below, click on Personal access token and then click on 'Generate new token'.

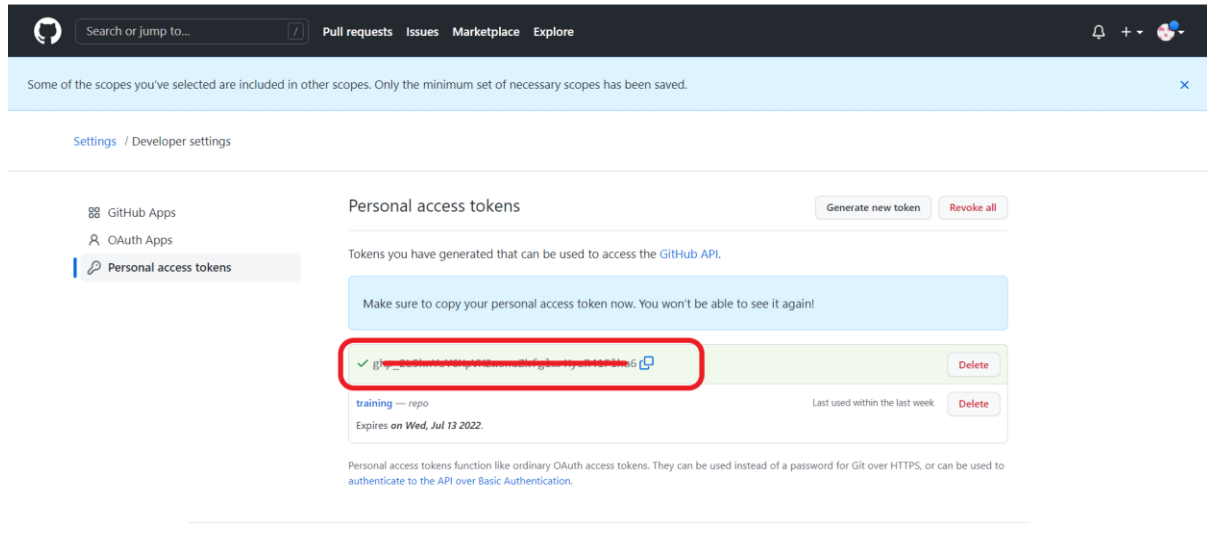

Step 4: After clicking on 'Generate new token', you will see below page. Insert something (token name) in 'note' section. Select 'Expiration' time of the token, then select a scope 'repo' as mentioned in below screenshot.

After inserting all the information, click on 'Generate token' button at the bottom of the page.

Step 5: After clicking on 'Generate token' button, below page will be visible. You will be able to see the token. Note that this token will be visible only once and you cannot see this afterwards. Copy this token and store it within your system for future use.
